

In the specification:

Page 2, delete lines 28-30 in their entirety.

Please amend the paragraph bridging pages 5 and 6 as follows:

The add-on part 10 is joined by positive form-locking engagement to the center piece 22 of the slaving element 14 so as to positively interlock with the slaving element in direct contact with the slaving element 14, as shown in the drawings. The platelike widening 20 of the slaving element 14, on its side toward the add-on part 10, has in this example three pins 24, 26 and 28, of which only pin 26 can be seen in Fig. 1, that are embodied integrally on the slaving element 14 and that fit by positive engagement into aligned bores 30, 32 and 34 on the inside 36 of the add-on part 10 and thus transmit the rotary motion of the slaving element 14 to the add-on part 10.
